

Credit Name:	2nd language programming					
Assignment Name:	Chap 3/4					
<b>Error Log Entry</b>						
What error message did you encounter (if any)?	No, didnt encounter any					
What unexpected behavior did your program exhibit? mainly everything was functional except at times i would ahve to choose between an integer value or double value						
What caused the issue? (e.g., syntax error, logic error, incorrect function usage, etc.)	type error at times					
Include a screenshot of specific lines of code.	<pre>mass = input.nextDouble(); //ask user for mass input.close(); double c = 3.0 * 1E8; //define c to make equation simpler</pre>			had to change both values to double or it may cost overflow		
How did you fix the issue?				fixed by changing type		
Provide the corrected code or solution using a screenshot.
